Lisa,

I talked with Rod McNeil and he is going to provide me some technical references regarding effluent concentrations per lbs of trout. I think this approach will work well for the Fish Tech Center. I told Matt Toner that I would be in contact with him during the process. He was planning on doing the additional sampling more as part of their own housekeeping and in anticipation of the TMDL. Their highest discharge is during the summer months when in-stream flow is the lowest. Most of the year discharge from the facility is ~450 – 600 gpm according to the reports in the permit file.

ICIS file from 10/25/2011 is attached.

Christian
